I love meeting business needs with technology! It becomes a puzzle of how to best make use of the resources and skills available while keeping within the constraints. I believe planning and keeping the main goals in mind while being conscious of security and best practices lead to success with testing and continuous feedback imperative at every step of the process.

I make time for learning new skills and approaches as I believe there are always ways to improve and find better methods to achieve goals.

I am currently learning Italian in preparation for a trip to Italy. In my spare time, I can be found hiking up the various mountains around Queensland, trying out a new coffee shop or hanging out with family.

TPG Telecom / Network Development Engineer

MARCH 2024 - CURRENT, BRISBANE / REMOTE

At TPG, I work as part of a dynamic and collaborative team, often taking on multiple projects simultaneously in a fast-paced environment. My role requires adaptability and effective time management to meet tight deadlines and achieve project goals. In addition to my technical contributions, I have also served as a project manager, leading a team to successfully complete a key project. This experience has honed my leadership skills and ability to coordinate efforts across various departments, ensuring seamless project execution and delivery.

Trybz / Senior software developer

OCTOBER 2021 - MARCH 2024, BRISBANE / REMOTE

In my capacity as the Senior Software Developer for Trybz, a social media platform catering to associations, I lead a team of developers and a QA tester. My technical expertise involves utilising Laravel and AWS for seamless deployment, and I successfully created a cross-platform mobile app for both iOS and Android using the Ionic platform. My daily responsibilities include efficiently managing customer tickets, prioritising platform maintenance, and strategic planning for future development, ensuring Trybz remains at the forefront of social media solutions for associations.

Contact Dynamix Ltd - Survey Dynamix / Web developer

JULY 2019 - OCTOBER 2021, BRISBANE / REMOTE

While at Contact Dynamix I was a full-stack web developer with the backend being my main focus. Contact Dynamix maintains a product called Survey Dynamix which is a customer feedback tool that allows businesses to survey existing customers after interactions to gain deeper business insight. My role was client-centric and included developing features for and helping clients with any support as needed while the company rapidly expanded.
